

Panel 1 - Effect on sports gambling expenditures

Coefficient estimate (\$/Fortnight)

Panel 2 - Effect on sports gambling participation

Coefficient estimate (probability)

* Panel 1 shows event-study coefficient estimates where the outcome variable is sports gambling expenditure in \$ per fortnight. Panel 2 shows estimates where the outcome variable is a dummy for if the individual gambles in the fortnight. In each specification the treatment group is given by individuals who gamble with their credit card. Within Year Unmatched compares the treatment group to those gambling with a transaction account in 2024. Across Year compares them to credit card gamblers in 2023. Triple Diff Unmatched is a triple difference specification comparing the treatment group to both controls.
